DAOSYS

DAOs are organizations that run completely on the blockchain and are governed by token holders. They are fully autonomous, transparent and decentralized.

DAOSYS harnesses the power of DAOs through our Bitcoin-level security with self-sovereign capital allocation and no-risk lending. Unlike other decentralized organizations, DAOSYS is free of treasury governance issues. The only risk is time and opportunity. Our mission is to change the shape of finance.

Driven from a layer 1 blockchain (syscoin)

Layer 1 blockchain is the new root of all value creation in tomorrow's world of financial applications. DAOSYS formalizes a financing vehicle as a layer 1 decentralized ecosystem. With perpetual risk-free growth driven by stakeholders with no central governance.

Time based lending through quests

Quests are created through Roundtable discussions between stakeholders and builders. Compartmentalizing risk and governance of Quests eliminates traditional contagion risks. With the revolutionary debt market technology from DAOSys, capital risk is converted to opportunity costs.

Group Collaboration with Roundtable

Roundtables provide a compartmentalized governance solution for coordinating ventures. Stakeholders and Builders are free to manage their venture and finances independent of other DAO members. Allowing for best-of-breed solutions to fit any venture.

No Systemic Risks with DAO Participation

Self-sovereign treasury management and market index derivatives differentiates DAOSys from existing DAOs. Members not only face no risk from the actions of other members, instead profiting from the increased volume. As a result, general volume is harnessed to create a feedback loop of funding for perpetual development.
